The collected data analyzed and found the differences in the sports participation and number of representations from the colleges in the inter university volley ball tournaments.

The study conclusion – female volley ball players having the higher participation the volleyball game at inter university tournaments in the three years of period. The private college volleyball players having the higher performance and participation in the inter university volleyball tournaments than the government colleges of Hyderabad Karnataka region.

Key words – Volleyball game, sports participation and performance.

INTRODUCTION

Education must meet the challenges presented in the society. The term 'Education' aims at training the whole child by means of guided participation. In this respect the term attains a physical significance and hence physical education has become a co-curricular activity. This means education has to take responsibility of all round development of the child by means of physical activity. Physical education endeavors to effect and modify positively the development of personality through the medium of physical activity. General education becomes mainstream, which provides orientation perspective, purpose, scope and meaning of physical activity undertaken. The qualities and qualifications an individual needs to achieve success in practical life cannot be generated in him by any one form of education alone. Formal and informal processes of education are not mutually exclusive and rather supplement each other. There has to be a proper balance between formal, informal, incidental and intentional modes of education, coordination and cooperation between the school and all other agencies so as to provide education in the real sense for the harmonious development of an individual.

Physical education provides awareness and learning attitude for the physical, mental, emotional, social and spiritual development of the human personality. It strengthens the social relationships and examines the impact of interactions between the individual, the family, the wider community and the environment on the health of population. It is education through physical. These are conceptualized and taught through an integrated approach to ensure that students achieve a healthy, active lifestyle, including a sense of well being. These are organized instruction in motor activities that contribute to the physical growth, health and body image of the individual. Life style has been changing over the past few decades in most parts of the world. The excesses of the consumer society are now showing their effects on health. In case we are to prevent the diseases that are the results of unfavorable life style, we have to ensure that sound decisions on healthy lifestyle are to be urgently cultivated. This will be a major role of physical and health education.

METHODOLOGY

Significance of the study

The present study based on survey method, the researcher visited collected data from government and private colleges affiliated to Gulbarga university, the researchers wanted to find out the sports participation and performance by the colleges at inter university level volleyball game and also compared the data of government and private colleges.
